Inventory Operational Facts

Document Type: Fact Knowledge Document

Purpose

This document contains operational facts for the inventory synchronization process.

Fact 1 - Inventory UI Refresh

Inventory received in the system may take approximately 2 to 4 hours to appear in the user interface. The actual time can vary depending on system and job load.

Fact 2 - Synchronization Frequency

Inventory synchronization jobs are scheduled to run approximately every 30 minutes.

Fact 3 - Processing Dependency

The time required for inventory information to become visible depends on the successful completion of the applicable background jobs.

Context

These facts apply to the production inventory process unless a more specific environment or application context is provided.

Source Classification

Operational fact. These statements should be treated as factual knowledge only when this document is the applicable authoritative source.
