Change Management Facts and Policy

Document Type: Policy and Fact Knowledge Document

Fact 1 - Change Dependency

Application behavior can be affected by application, database, infrastructure, configuration, or integration changes.

Fact 2 - Deployment Validation

A successful deployment does not by itself prove that all downstream business scenarios are functioning correctly.

Policy 1 - Change Traceability

Production issues potentially related to a recent change should be analyzed against the applicable change record and deployment information.

Policy 2 - Validation

Changes should be validated using appropriate technical and business checks after deployment.

Policy 3 - Evidence

A relationship between a change and an incident should be described as confirmed only when supporting evidence establishes that relationship.

Context

These facts and policies apply to enterprise application change and release management.
